DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of claims 1-4 in the reply filed on 8/23/04 is acknowledged. The traversal is on the ground(s) that the increased cost to the Applicant and government require a search of all claims. This is not found persuasive because the species found within the Application are distinct and the rules require distinct species to be separately prosecuted.

The requirement is still deemed proper and is therefore made FINAL.

Claims 5-49 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected claims, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 8/23/04.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims rejected under 35 U.S.C. 102(b) as being anticipated by Dennison ('449).

In reference to claim 1, Dennison ('449) teaches a method comprising:

Application/Control Number: 10/618,471

Art Unit: 2813

Forming memory circuitry and peripheral circuitry over a substrate, the peripheral circuitry comprising first and second type MOS transistors (Col.2, lines: 10-20); and

Conducting second type halo implants into the first type MOS transistor in less than all peripheral MOS transistors of the first type (Col.2, lines: 20-30).

In reference to claim 2, Dennison ('449) teaches wherein the second type is p-type (Col.2, lines: 20-30).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dennison ('449) as applied to claims 1-2 above, and further in view of Dennison ('249).

In reference to claims 3 and 4, Dennsion '449 teaches wherein the second type is p-type (Col.2, lines: 20-30). However, fails to explicitly teach wherein the conducting of the second type halo implants comprises conducting the implants into only one of the source/drain regions in less than all of the peripheral MOS transistors of the first type and not the other of the source/drain regions of the less than all of the peripheral MOS transistors of the first type.

Art Unit: 2813

However Dennison ('249) does teach conducting the implants into only one of the source/drain regions in less than all of the peripheral MOS transistors of the first type and not the other of the source/drain regions of the less than all of the peripheral MOS transistors of the first type (Fig. 4).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Dennison's '449 reference to include conducting the implants into only one of the source/drain regions in less than all of the peripheral MOS transistors of the first type and not the other of the source/drain regions of the less than all of the peripheral MOS transistors of the first type as taught by Dennison '249 in order to selectively dope source/drain areas (Col.4, lines: 5-25).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura M Schillinger whose telephone number is (571) 272-1697. The examiner can normally be reached on M-T, R-F 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/618,471
